

Proxy Client

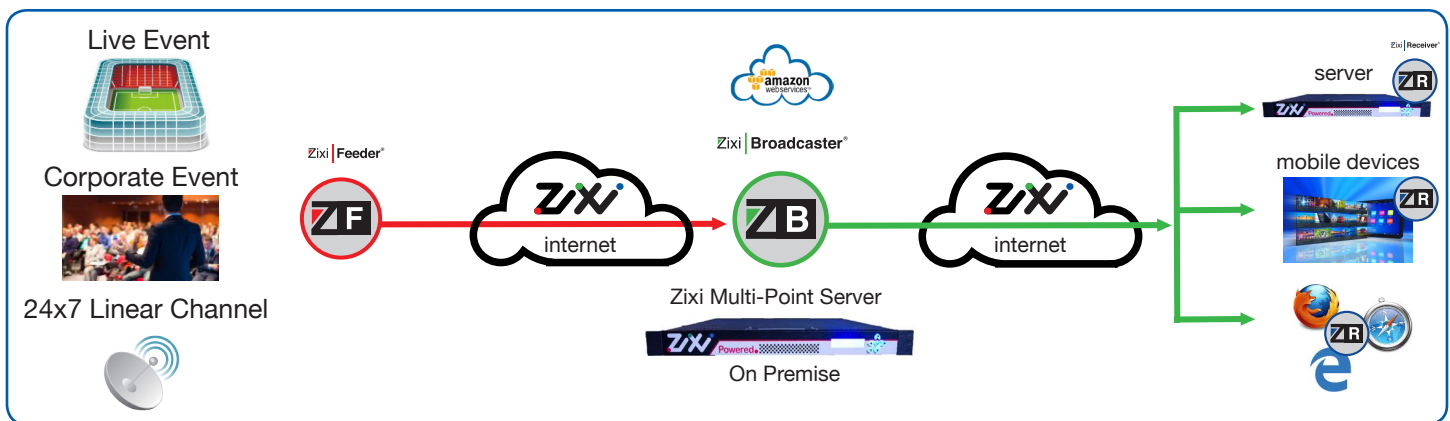

Gateway between Zixi Streaming Protocol and HTTP.

Zixi Proxy client is a flexible software component providing a gateway between the Zixi streaming protocol and HTTP protocols. Zixi Proxy is designed to run on mobile devices, servers or along web browsers and to allow them to receive the Zixi streaming protocol. Zixi Proxy also allows accelerated file transfer or ZIFT allowing for the downloading and uploading of media files from the device.

Zixi Proxy client

Resides at the End Point of consumption:

- Accepts input from Zixi | Broadcaster via standard IP networks (including the public Internet)
- Output HTTP to a local host destination
- Download/Upload files from/to Zixi | Broadcaster

Zixi Proxy Client:

Zixi Proxy Specifications
